# Static Dissipative Lab Coats Instructions for Use

Figure 1. Charleswater Static Dissipative Lab Coat

### **Description**

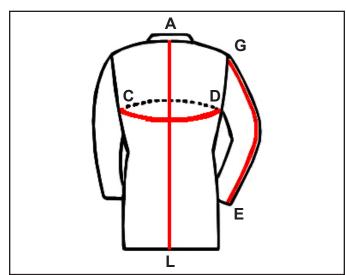

Charleswater Static Dissipative Lab Coats meet the required limit for Rp-p of less than 1 x 10<sup>11</sup> ohms as stated in EN 61340-5-1, tested per ANSI/ESD STM2.1.

"The ESD risk provided by everyday clothing cannot be easily assessed. The current general view of experts is that the main source of ESD risk may occur where ESDS [ESD sensitive items] can reach high induced voltage due to external fields from the clothing, and subsequently experience a field induced CDM [Charged Device Model] type discharge. So ESD control garments may be of particular benefit where larger ESDS having low CDM withstand voltage are handled, and operators habitually wear everyday clothing that could generate electrostatic high fields." [CLC TR 61340-5-2 User guide Garments sub-clause 4.7.7.1 Introductory remarks]
